Skills

Linux OS
SUSE Linux, RHEL, UBUNTU

Virtualization
KVM, VMware, Vagrant, VirtualBox

AWS Cloud Services
EC2, S3, CloudFront, Lambda

Automation & Scripting
BASH, Python

Containerization
Kubernetes, Docker, Podman

Monitoring
Prometheus, Graphana

Summary

My background is primarily in Linux system administration, specifically with the second-largest Linux distribution. Throughout my career, I have focused on providing technical support and addressing general Linux issues while collaborating with IT departments from some of the largest companies. I have practical experience with Kubernetes and hold the AWS Certified Cloud Practitioner certification. I am currently seeking new opportunities and would love to learn more about automation and cloud computing while improving my knowledge in the area of containerization.

Professional Experience and job description

SUSE Linux — 2017 - today
Senior Technical Support Engineer — Prague, CZ

- Monitoring Linux servers to ensure optimal performance and reliability.
- Apply updates and patches to keep systems secure and up to date.
- Diagnose and resolve technical issues related to Linux environments
- Configure and administer Linux servers for various purposes, such as web hosting, database management, or virtualization.
- Assist customers with Linux-related queries, including command-line operations, software installation, and configuration.
